The application context widget is not called after calling the main application

If you use the selection context menu to call the Google Translate application widget to translate a word/fragment of text, and then call the Google Translate application from the widget menu, then further use of the corresponding item of the selection context menu does not call the Google Translate widget, but calls the Google Translate application with the word/fragment of text that was selected first.

Environment:

Device: Poco X3 Pro 6/128

OS: Android 11 RKQ1.200826.002

Shell: MIUI Global 12.5.5

Google Translate: 6.47.0.478887902.2-release

Preparation:

- Install the "Google Translate" application on the device.
- Provide the device with access to the Network.
- Provide access to the text available for selection.

Steps:

1. Open a third-party application or web page that contains text available for selection.
2. Select an arbitrary word or text fragment.
3. In the context menu of the selection, select "Translate".
4. Use the widget menu to call the "Google Translate" application.
5. Return to the third-party application with the text available for selection.
6. Select a word or text fragment different from the previous one.
7. In the context menu of the selection, select "Translate".

Actual result:

1. A third-party application or web page is opened with text available for selection.
2. A word or text fragment is selected.
3. The Google Translate widget is displayed with the selected word/fragment of text.
4. The Google Translate application with the selected word/fragment of text is displayed.
5. A third-party application is displayed with text available for selection.

6. A word or text fragment is selected that is different from the previous one.
7. The Google Translate application is displayed with the entered word/fragment of text that was selected in step 2.

Expected result:

7. The Google Translate widget is displayed with the entered word/fragment of text that was selected in step 6.

When using Arabic as the input language, the cursor and placeholder are placed on the left side of the input field

If you select Arabic as the input language in the application, the cursor and placeholder are located on the left side of the input field. While the direction of writing (and thus typing) in this language is from right to left.

Environment:

Device: Poco X3 Pro 6/128

OS: Android 11 RKQ1.200826.002

Shell: MIUI Global 12.5.5

Google Translate: 6.47.0.478887902.2-release

Preparation:

- Install the "Google Translate" application on the device.
- Provide the device with access to the Network.

Steps:

1. Select Arabic language in the application.

Actual result:

The cursor and placeholder remain on the left side of the input field.

Expected result:

The cursor and placeholder move to the right side of the input field.

Words added to the dictionary in offline mode are not synchronized after connecting to the Network

If the user, using the application in offline mode, saves words to the dictionary, then when the device is further connected to the Network, such words are not automatically synchronized. That is, on the web page of the service (which uses the same account), these words do not automatically appear in the dictionary.

Environment:

Device: Poco X3 Pro 6/128

OS: Android 11 RKQ1.200826.002

Shell: MIUI Global 12.5.5

Google Translate: 6.47.0.478887902.2-release

Preparation:

- Install the "Google Translate" application on the device.
- Provide the device with access to the Network.
- Provide access to the web version of the service.
- Provide a shared account for the application and the web version of the service.

Steps:

1. Turn off the Network connection on the device.

2. Add a few random words in English (the offline English language pack is installed in the application by default) to the dictionary.

3. Turn on the Internet connection on the device.

4. Open the web page of the service using the same account as in the application.

5. Open the dictionary of the service web page.

Actual result:

Words added offline to the application dictionary are not displayed in the dictionary of the service web page.

Expected result:

Words added offline to the application dictionary are displayed in the dictionary of the service web page.

Dictionary button does not work in certain screen orientations

If you change the screen orientation from portrait to landscape clockwise, the dictionary button does not work.

Environment:

Device: Poco X3 Pro 6/128

OS: Android 11 RKQ1.200826.002

Shell: MIUI Global 12.5.5

Google Translate: 6.47.0.478887902.2-release

Preparation:

- Install the "Google Translate" application on the device.

Steps:

1. Change the screen orientation from portrait to landscape clockwise.
2. Press the dictionary button.

Actual result:

The dictionary is not displayed.

Expected result:

The dictionary is displayed.
